

Fairfield Control Systems Limited strives to enhance the business performance of its customers through the expert application of Automation and Control.

The directors regard the prevention of pollution and promotion of all aspects of environment policy as being of major importance to the successful operation of the company. The intent is to comply with all relevant environmental legislation, all other relevant requirements and continuously improve the company's environmental performance.

We will...

- Prevent and minimise all forms of pollution
- Minimise our travelling by promoting the use of home working, public transport, vehicle sharing and using local accommodation when on site.
- In our designs consider the environmental impact including the efficient use energy and water and the minimisation of waste.
- Support our clients in enabling them to obtain the best performance from their systems.
- Recycle and reuse materials whenever possible and encourage the refurbishment of clients systems rather than replacement.
- Minimise our use of energy and water
- Raise the awareness of employees of the potential environmental impacts of their activities within the business and foster their commitment to bring about impact reduction.
- To establish, monitor and review our environmental objectives and targets at regular management review meetings.
- Promote our policy and sound working practices to subcontractors. Ensure that the policy is communicated to those working for and on behalf of FCS and that training is provided as appropriate.
- Consider the environmental impact of our investment decisions.
